

Molecular layers and electric fields as tools for controlling magnetism in nanostructured systems

Liza Herrera Diez

Institut Néel-CNRS, Grenoble, France

★ Light-sensitized magnetic devices

Diluted magnetic semiconductors-GaMnAs

Dye-molecule functionalization

Light-exposure effect on magneto-transport properties

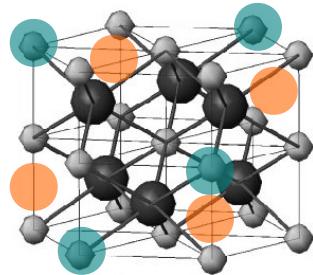

★ Electric-field-effect magnetic devices

FePt-Coercive field distributions

Electric-field effect on magnetotransport properties-dielectric barriersc

Diluted magnetic semiconductors-GaMnAs

Zinc-blende structure

● Interstitial Mn

● Substitutional Mn

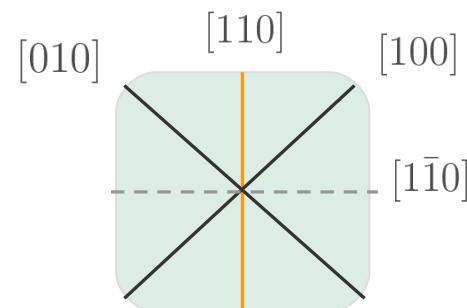

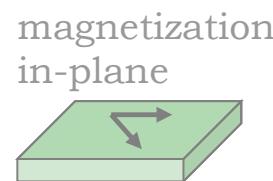

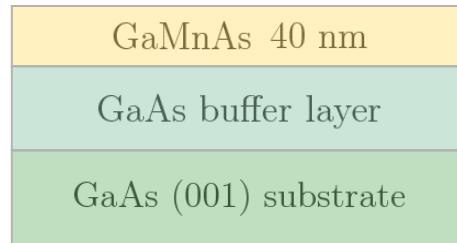

● Magnetic moment

● Holes

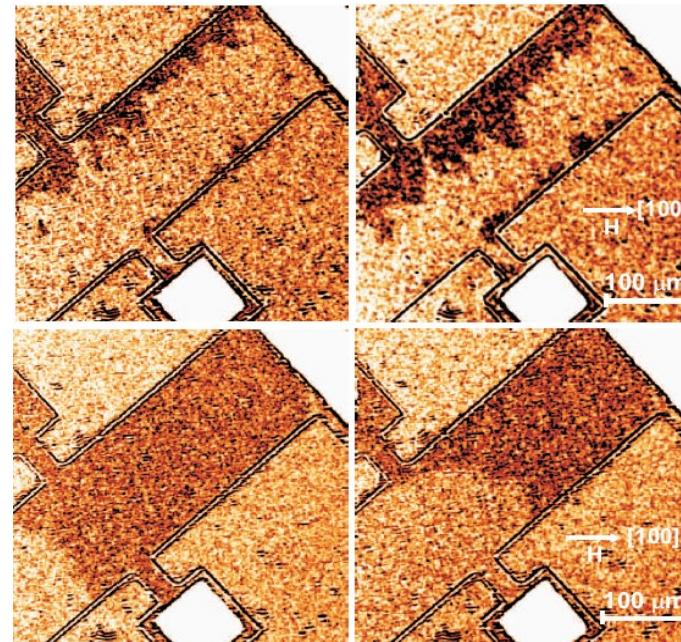

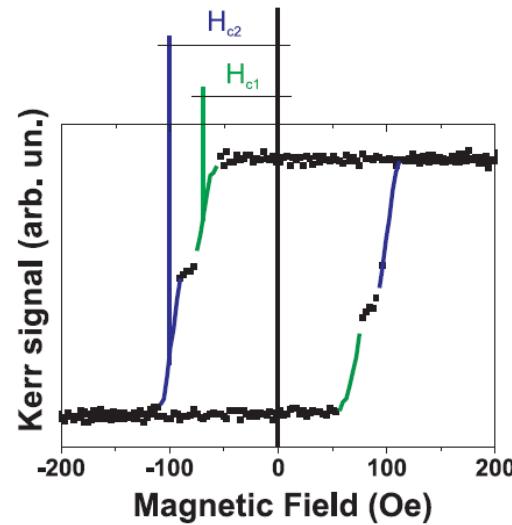

Hole mediated
ferromagnetism

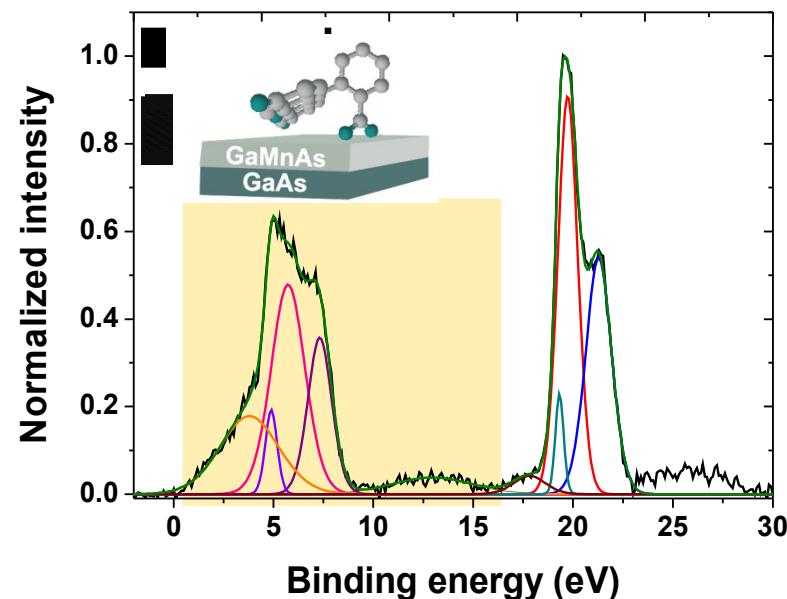

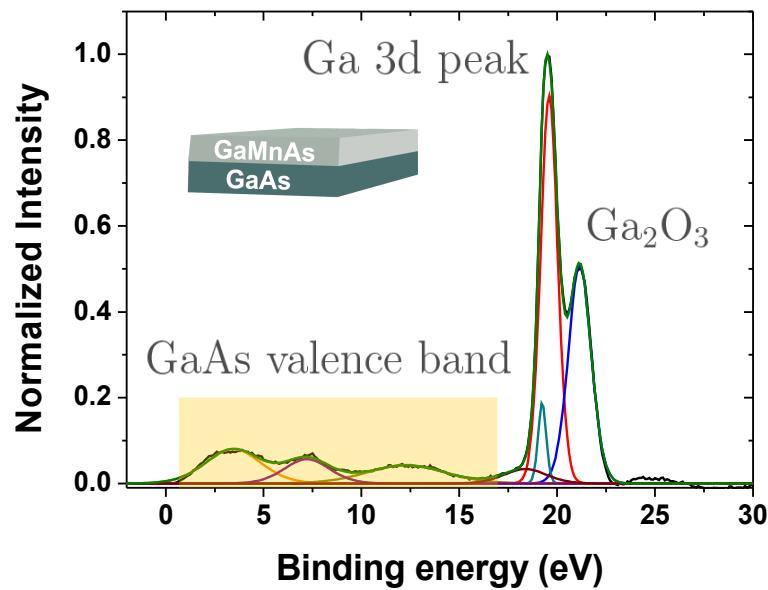

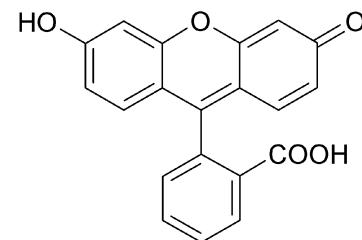

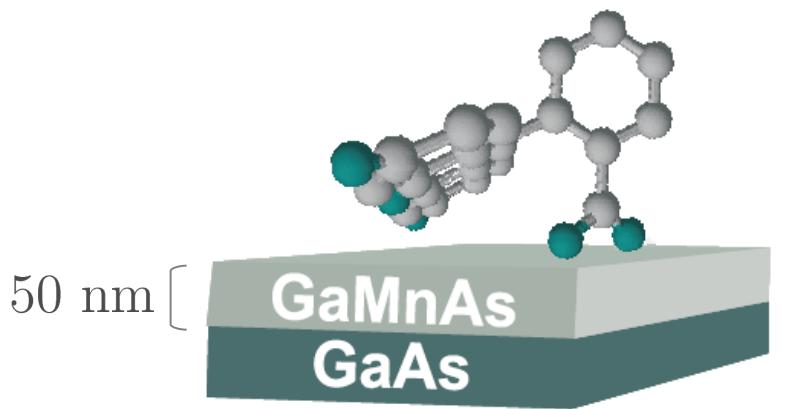

Diluted magnetic semiconductors-GaMnAs

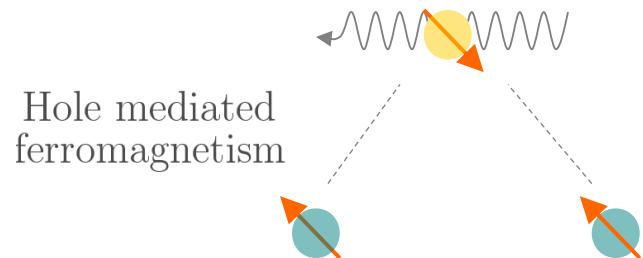

uniaxial+biaxial anisotropy

Dye-molecule functionalization

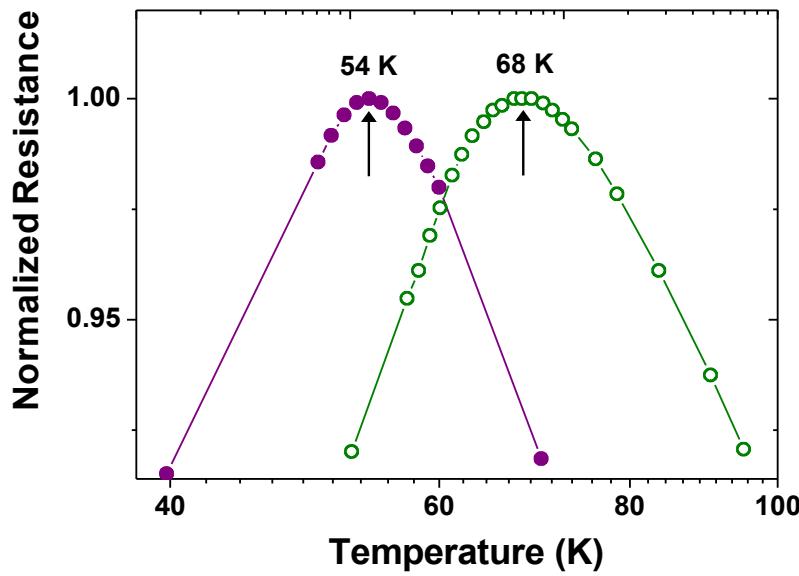

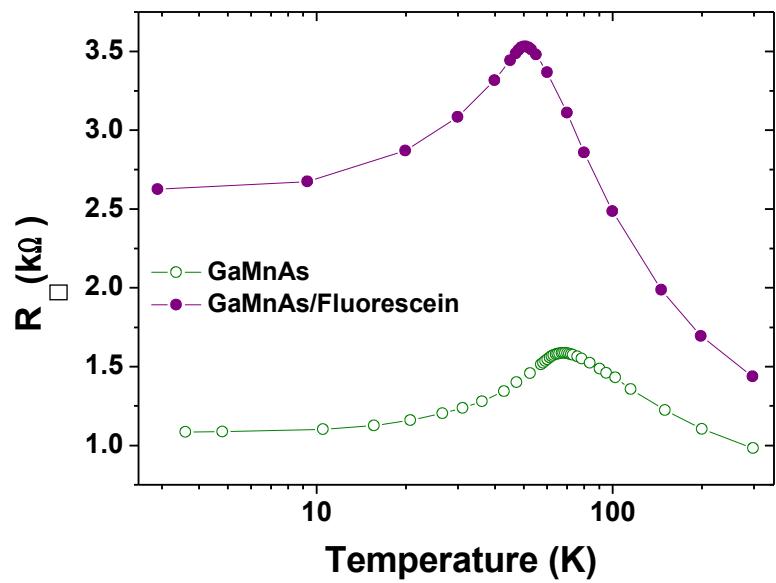

Dye-molecule functionalization

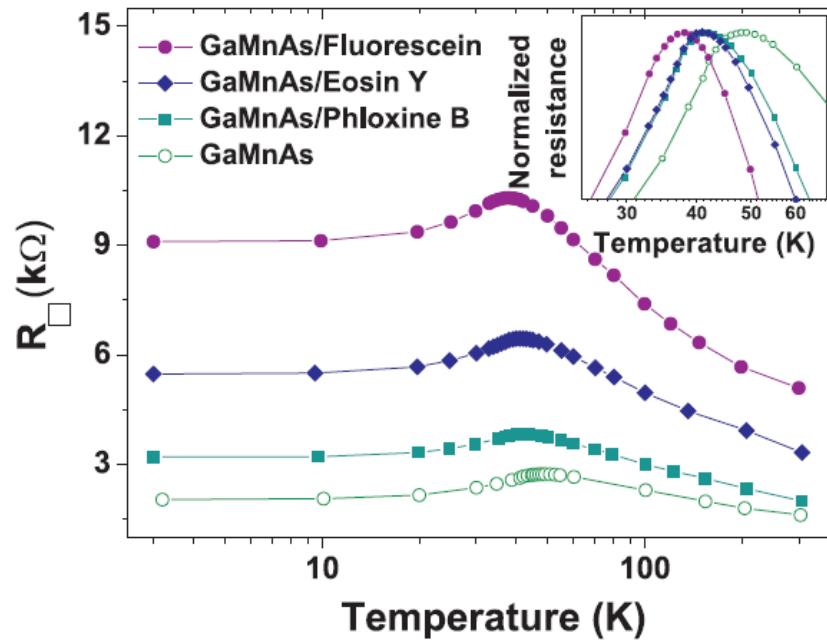

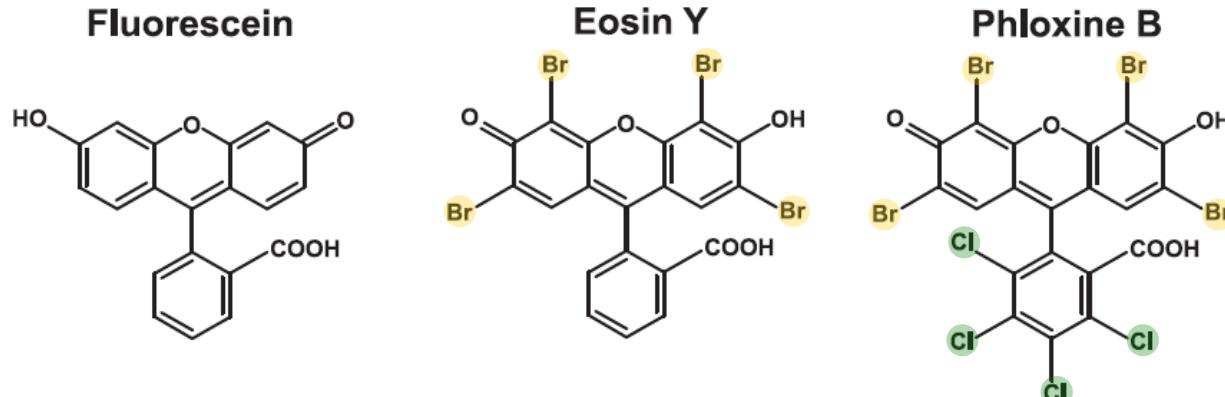

$$T_c \propto p^{1/3}$$

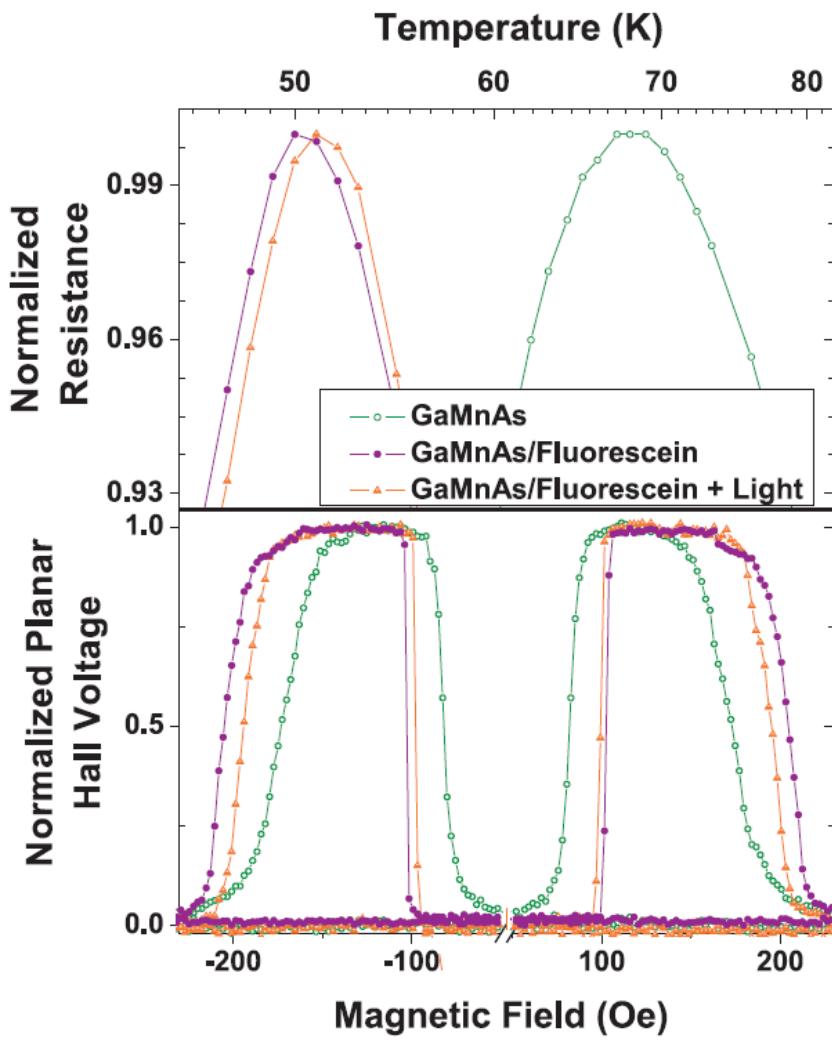

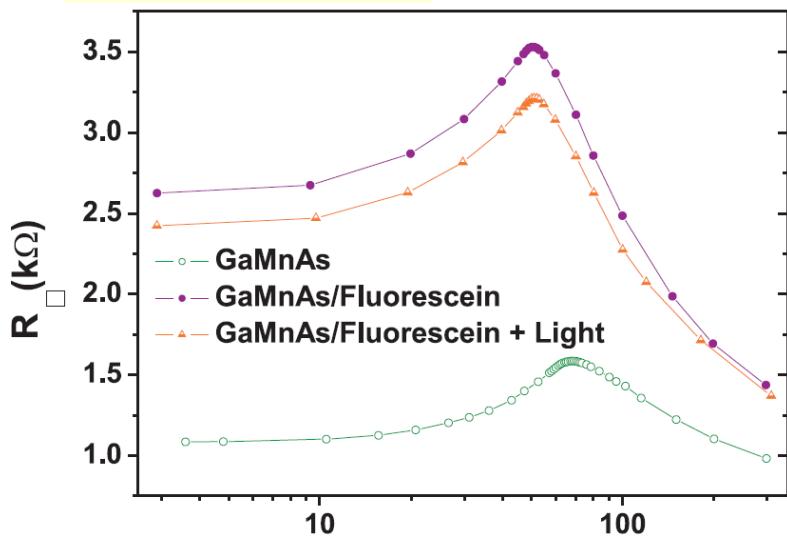

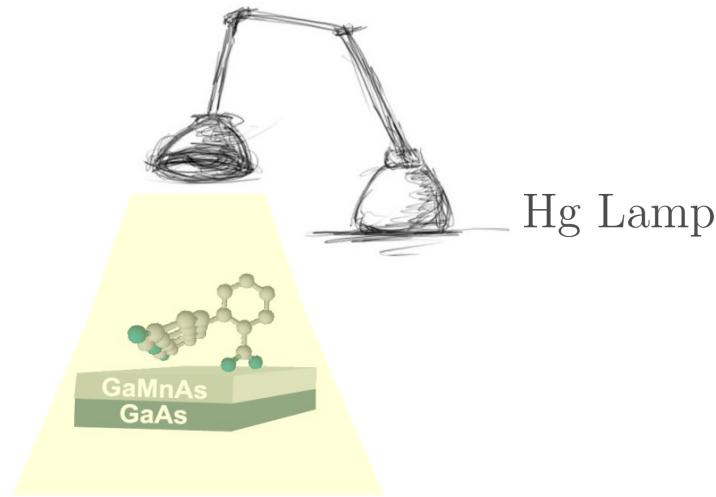

p : charge carrier concentration

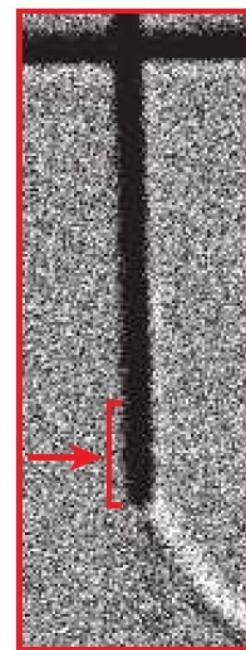

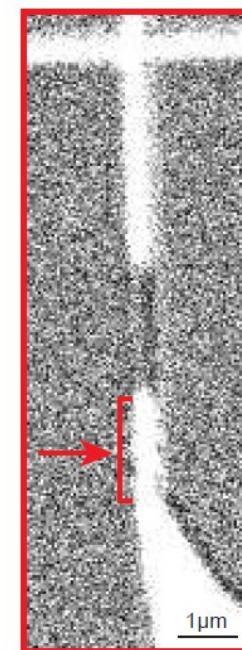

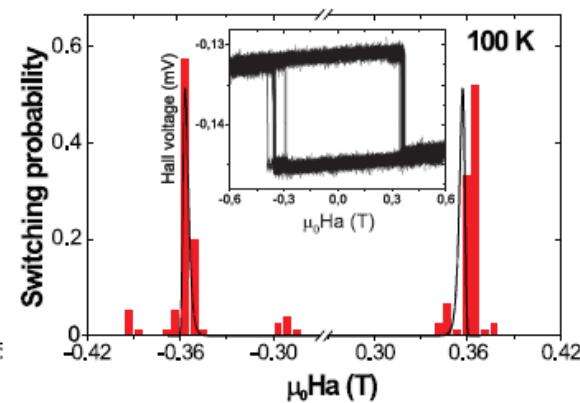

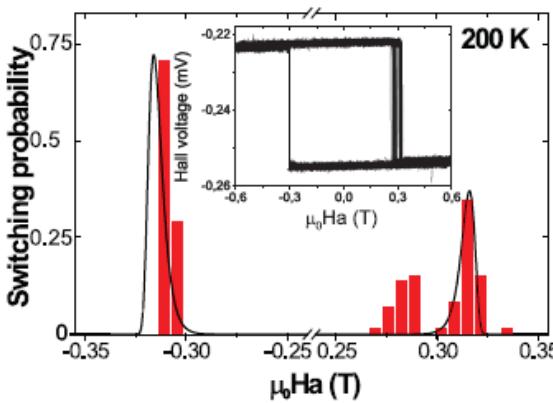

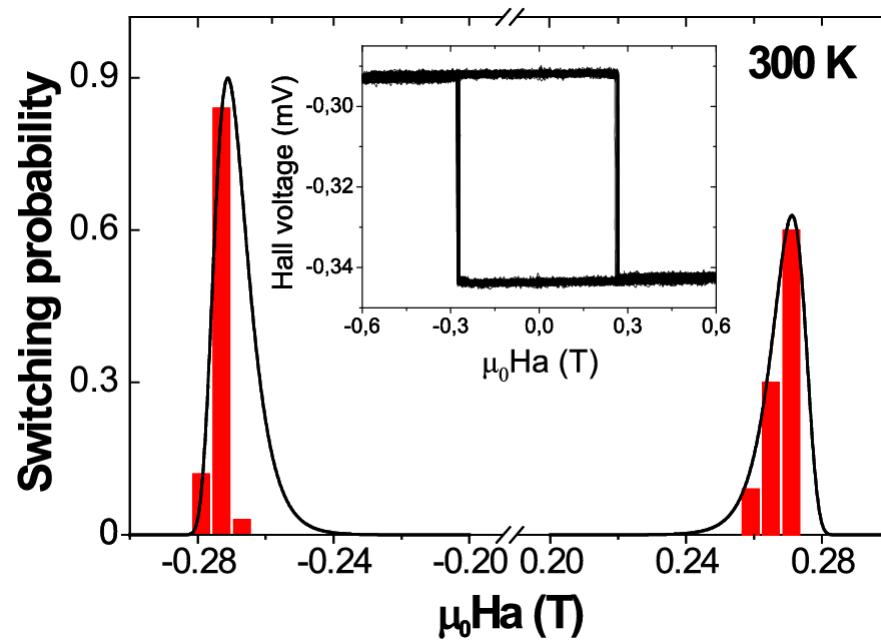

Dye-molecule functionalization

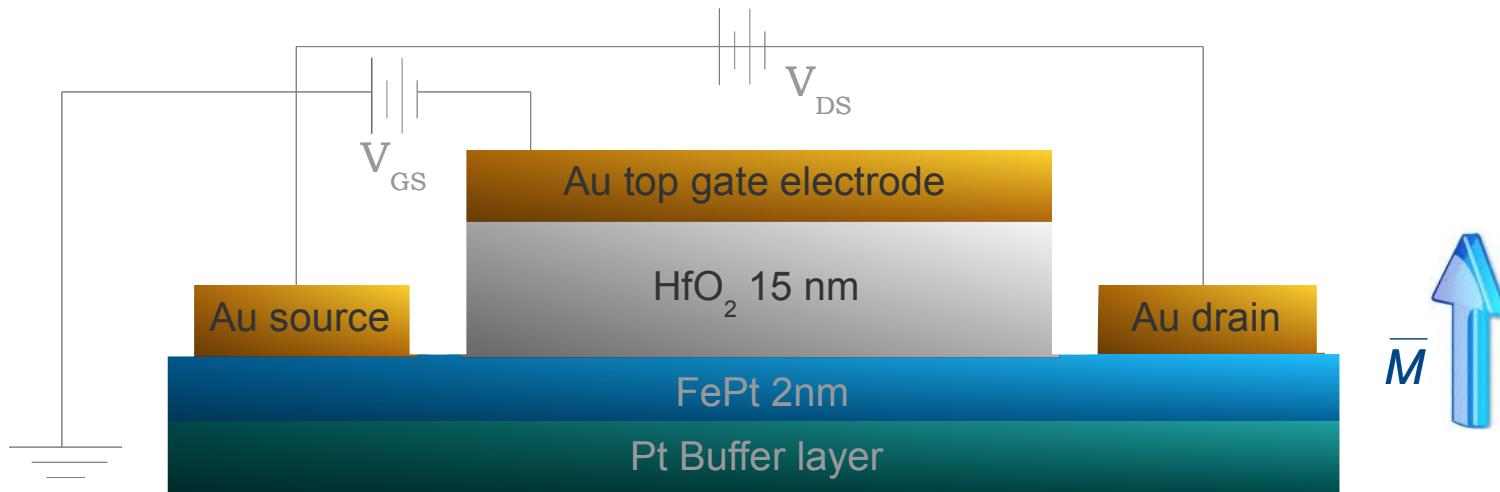

Light-exposure effect on magnetotransport-properties

FePt-Coercive field distributions

Electric-field effect on magnetotransport properties-dielectric barriers
